ANDREW WEBSTER

Cybersecurity | Security Operations

Tampa, FL | andrew.04.webster@gmail.com
linkedin.com/in/andrew-webster-cyber | github.com/drew109

PROFILE

Security+ and Network+ certified cybersecurity student graduating May 2027. University IT internship experience includes security-ticket triage, SIEM and endpoint-tool support, and access administration. Documented projects cover AWS permission testing, synthetic Windows detections and authorized web-security assessment.

EDUCATION AND CERTIFICATIONS

University of Tampa | B.S. Cybersecurity Expected May 2027
CompTIA Security+ / Network+ | PCEP (Python Institute) | Dean's List, Fall 2025

TECHNICAL SKILLS

Cloud and identity: AWS IAM Identity Center, S3, CloudTrail, MFA, least privilege
Security and systems: Windows event logs, Burp Suite, Linux, TCP/IP, DNS
Support and scripting: Microsoft 365, Active Directory, Group Policy, Python, PowerShell, Git

RELEVANT EXPERIENCE

AWS Student Builder Campus Leader Apr 2026 - Nov 2026
- Earned program-manager credit for 24 social posts, 14 classroom announcements, 3 mini pitches and 4 tabling activities supporting student cloud learning.

theCoderSchool | Coding Instructor Jan 2026 - Present
- Teach Python, C# and Lua through individualized projects; help students debug their code and explain technical concepts at their level.

CrunchAtlas | Frontend Developer Intern Mar 2024 - Aug 2024
- Assisted with Linux setup and device configuration during a frontend development internship.

Wentworth Institute of Technology | IT Specialist Intern Aug 2023 - May 2024
- Supported remote and onsite users with laptop, account and VPN issues; assisted with Microsoft 365, Active Directory and Group Policy administration and documented troubleshooting in tickets.
- Triaged security tickets and investigated potential incidents using SIEM and endpoint tools; assisted with MFA, email and firewall administration, audits and control reviews.

SELECTED SECURITY PROJECTS

AWS Cloud Security and IAM Lab | GitHub
- Validated allowed and denied S3 actions under MFA-protected, group-based access; configured read-only permissions, Block Public Access and SSE-S3, and reviewed CloudTrail evidence.

Windows Security Detection Lab | GitHub
- Generated severity-ranked alerts and triage guidance from synthetic Windows events using PowerShell; detected failed-login bursts, suspicious scripts and local-admin changes with MITRE ATT&CK mappings.

OWASP Juice Shop Security Assessment | GitHub
- Validated an SQL-injection authentication bypass in an authorized local Juice Shop lab using Burp Suite; documented the failed-login baseline, sanitized evidence and remediation.

Predator Labs Web Security and Operations
- Verified PHP/JavaScript storefront releases through security regression tests and public asset comparisons; used AI-assisted development and checked tracking-consent behavior.
